Problem B

Farm Sweet Farm

Time limit: 1 second
Memory limit: 256 MB

Mr. Ucup has a rectangular farm of size $N \times M$. Every plant on the farm has the same selling price of X rupiah. When the dry season arrives, some plants die and cannot be harvested. Determine Mr. Ucup's total income if he sells all the plants that are still alive.

Input

– The first line contains three integers N, M, and X ($1 \leq N, M \leq 100$, $1 \leq X \leq 10^6$), representing the size of the farm and the selling price of each plant.

– The next N lines each contain M integers $A_{i,1}, A_{i,2}, \ldots, A_{i,M}$, where each $A_{i,j}$ is either 1 or -1. If $A_{i,j} = 1$, the plant at that position is still alive. If $A_{i,j} = -1$, the plant at that position is dead.

Output

– Print Mr. Ucup's total income in rupiah.

Sample Input 1	Sample Output 1
3 3 10 1 -1 1 -1 -1 1 1 -1 -1	40

Sample Input 2	Sample Output 2
2 5 19 1 1 1 -1 -1 1 -1 1 -1 -1	95
